

DISCOVER THE VANDA

Deeply inspired by the architectural intent of the Pacific range of homes, The Vanda's has been structured with high raked cathedral ceilings to emphasise the movement of nature air and thermal ventilation. Weatherboard cladding acts as a sustainable material to protect the home and raw chunky timber pergolas add the coastal pacific ambiance. Polished concrete flooring is poured throughout the home to action sustainable thermal mass production. The window mapping has been carefully considered to capture light and air without disrupting the need for privacy. This double storey home situates the main living, kitchen and dining area in an open mapped space for ultimate crossflow circulation of air. The lower living invites an abundance of natural Northern light and has centralised views across the pool and lush landscaping. There is a separate media room on the front of the home with access to the exterior deck. The garage fits two cars and has optimal storage space. The upper level is solely designed to retreat and relax, with stunning internal timber decking connecting each of the bedrooms. The master bedroom is situated on the opposite wing and captures expanse views of the surrounding environment. The Vanda is a stunning home that naturally achieves functional and sustainable considerations.

Other Design Options

At Eco Essence Homes we understand that you may want to tailor your home to suit your needs with optional Eco Essence Homes extras or custom design requirements.

Build with Comfort
